Recorded Future for Amazon GuardDuty

Detect and respond to threats faster with actionable context at your fingertips. Recorded Future delivers security intelligence to arm security and IT teams that use Amazon GuardDuty with the real-time information they need to detect incidents earlier and prioritize their findings with confidence.

Contextualized Intelligence

Contextualized intelligence is a crucial component of any truly proactive security strategy. Recorded Future empowers faster, more informed security decisions with relevant insights that are updated in real time and integrated with your existing infrastructure. Security intelligence from open, technical, and dark web sources helps reduce security risk by automatically correlating against telemetry data from your AWS networks for real-time detection of potential threats.

Security teams using Amazon GuardDuty can easily discover and validate findings with Recorded Future intelligence. Real-time natural language processing automatically summarizes information on more than a billion threat-related entities while providing full access to the original sources of intelligence. Utilizing the Recorded Future browser extension over Amazon GuardDuty allows users to enrich findings with evidence-based, real-time risk scores and risk rules — all without having to leave Amazon GuardDuty. This allows users to confidently prioritize the most important findings in their environment, simplify workflows, and maximize the ROI of existing cybersecurity solutions.

BENEFITS

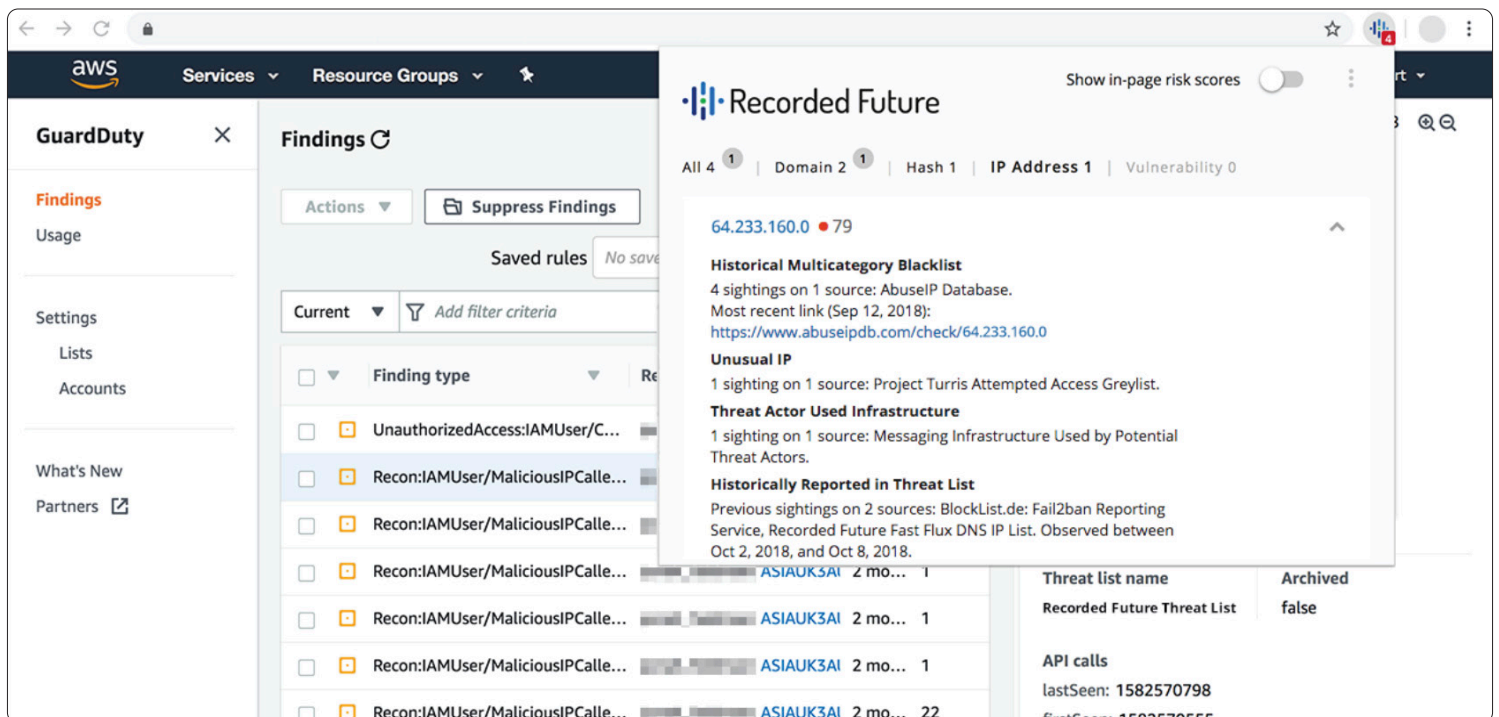

- Automatically correlate against risky IPs
- Detect previously unknown threats
- Respond to findings faster with real-time context
- Maximize investment in existing security tools

KEY FEATURES

- Identify 22% more security threats before impact
- Improve response times by 63%
